Category:Corel software Virus hits Pa. Aramaic clock, keeps time, perpetuating religious divide - jellicle =====
macNchz Of all the things that have been made useless through the onslaught of technology, this seems like the one instance in which the people of the past were quite clever and able to come up with a clever solution. Q: How can I make a div "mobile-size" when the browser window is reduced in size? I have two divs (a header div and a mainContent div) and they are set to relative. Here is the CSS for the header div: #header{ position:relative; background-color:#004482; height:70px; width:100%; margin:auto; text-align:center; } and here is the CSS for the mainContent div: #mainContent { height: 50%; background-color: green; width: 100%; position: relative; margin-bottom: 50px; text-align: center; font-size:20px; font-family: "Crimson Text"; } The problem is that when the browser window is reduced (by running the smaller version of the website in a mobile phone), the header div and mainContent div do not overlap. Is there a solution to make these two divs overlap at all times? This is the whole website: Thank you so much! A: You will need to add some sort of width property to the mainContent div. This will cause it to expand with the smaller width of the browser window.
#mainContent { width: 100%; 570a42141b
